About MOTIV Motors

Every MOTIV Motor is hand checked, assembled and packaged by a professional in house at our MI, USA office. During this process every motor component must meet MOTIV requirements before assembly and packaging. Included is a specification check list which is filled out on a motor to motor basis all through the testing and assembly process to ensure the quality of our finished product

M-CODE

FEATURES

- Specially selected stator material for low power loss
- High quality pure copper wire
- Emphasis on hand winding for consistency

SOLDER TABS

- Gold plated pure copper tabs for low resistance

All Parts: Motive MCR 13.5T PRO TUNED SPEC MOTOR

- Internal "Drop Connection" design to ensure low resistance and consistent internal solder joints

ROTOR:

- Sintered rotor
- High quality neodymium magnet material for lasting magnetism

CAN ASSYMBLY

- High flow vent holes to allow air flow in and out for lower operating temps
- Machined all aluminum anodized can, front plate and end bell
- Infinitely adjustable timing
- Dual precision ball bearings

OVERALL

- Every motor tested in house during the assembly and packaging process
- Spec sheet provided uniquely for every motor to ensure quality
- Designed to comply with ROAR specifications
- Lightweight completed design
- Packaged in reusable cushioned storage container
